

Getting Started with Statistics Labs

Git, GitHub

Darvin Koka

Politecnico di Milano

 github.com/darvinkoka

POLITECNICO
MILANO 1863

Git

- **What is it?** It's a Distributed Version Control System (DVCS), *id est* a software that keeps track of the full history of a codebase;
- it's free and open source;
- open your terminal and run "git -v". If nothing happens or if you receive an error, install git by clicking on the Git icon above.

Git $\neq$ GitHub

GitHub

- **What is it?** It's a website where developers can store and share their git repositories on a remote server;
- create an account on GitHub by clicking on the icon;
- all the labs of the course will be available on the repository we'll create during the first laboratory session, which you'll be able to access from **here**.
- or you can open the terminal in any folder and write:
git clone https://github.com/darvinkoka/Statistics_2026_2027.git
- to update such folder open the terminal at the repository and just write *git pull*.

Main commands

`git clone` Clones a remote repository to the local machine

`git add` Stages file changes for the next commit

`git commit` Saves changes locally with a descriptive message

`git push` Uploads local commits to the remote repository

`git pull` Fetches and merges changes from the remote repository
